Fabius Lihanda Achevi

Data Scientist | DevOps Engineer

Swindon, England · +447388293572 · Linkendln · GitHub · Medium · Portfolio

PROFESSIONAL SUMMARY

Data Scientist and DevOps Engineer focused on building reliable, data-driven applications and automating technology workflows. Interested in applying machine learning to business challenges while developing scalable cloud infrastructure and streamlined software delivery processes. Driven by continuous learning and a desire to bridge data science and cloud engineering to deliver practical, efficient, and maintainable solutions.

PROFESSIONAL EXPERIENCE

The Openwork Partnership, Swindon, England *Jan 2026 – Present*

Data Science Intern

- Built predictive and probabilistic forecasting models for business indicators, supporting data-driven planning and critical business decision-making.
- Collaborated on the development and enhancement of two web applications integrating Optical Character Recognition (OCR) and Large Language Models (LLMs) to automate manual case handling and document-sourcing checks, targeting approximately **150 hours of time savings per month**.
- Refined and enhanced a redress calculation web application, improving the calculation process and reducing reliance on a single individual across different business.
- Implemented an end-to-end machine learning lifecycle using MLflow and Databricks for an early warning system, supporting model development, experiment tracking, and lifecycle management.
- Supported departmental reporting requirements through data analysis, reporting, and the delivery of actionable insights.

Communications Authority of Kenya, Nairobi, Kenya *May 2024 – Aug 2024*

Intern, Junior Cyber Security Analyst (KE-CIRT)

- Gained hands-on experience in monitoring and analyzing cybersecurity threats to protect nation critical infrastructure.
- Honed skills in threat detection, incident response, and vulnerability assessments using various cybersecurity tools and technologies.
- Participated in the development and implementation of cybersecurity policies and awareness programs.
- Collaborated with a team to investigate emerging threats within the Kenyan cyberspace.

TECHNICAL SKILLS

Cloud & containers	AWS , Docker, Kubernetes, Helm
CI/CD	Jenkins, Gitops workflows, Azure Devops, Git
IaC & automation	Terraform, Ansible, Python (boto3), Linux
Monitoring and Observability	Prometheus, Grafana
Data science & ML	SQL, Python , Azure ML, MLflow, Databricks, OCR, LLMs, Time-series predictive probabilistic forecasting
Software Engineering	Flask, Django, Selenium

EDUCATION

DevOps Bootcamp *Feb 2026 – Nov 2026*
TechWorld with Nana (Online)

- **Technologies:** Linux, Git, Docker, Kubernetes, AWS, AWS EKS, Terraform, Ansible, Jenkins, Prometheus, Python, Nexus, DigitalOcean
- **Skills developed:** Continuous Integration and Deployment, Infrastructure as Code, Cloud Platform, Artifact Repository Management, Scripting and Automation, Container Orchestration, Monitoring
- **Git Repository with all projects:** DevOps Bootcamp Projects

Bachelor of Science in Computer Science *Sep 2021– Apr 2024*
Egerton University, Njoro, Kenya

- Built a foundation in software engineering, algorithms, databases, and computer systems, applying these skills through practical software development and machine learning projects.
- Developed **MkulimaAid**, an AI-powered crop disease diagnostic platform, enabling farmers to identify common crop diseases through image-based diagnosis.
- **Achievement:** Launched and showcased MkulimaAid at the 2025 Nakuru National Agricultural Show, demonstrating its potential and helping **50+ farmers** identify and manage common crop diseases using AI and machine learning.

AWS re/Start Graduate *May – Aug2024*
AWS re/Start Kenya – Ajira Digital (Online)

- Gained practical experience with AWS services, including EC2, S3, VPC, IAM, RDS, and CloudWatch.
- Developed foundational skills in Linux, Python, networking, cloud architecture, and troubleshooting.
- Applied cloud security best practices and explored DevOps principles, monitoring, and cloud cost optimisation.
- Completed hands-on labs and team projects, strengthening technical problem-solving and collaboration skills.
- Prepared for the AWS Certified Cloud Practitioner certification.

DEVOPS ENGINEERING PROJECTS

TechWorld with Nana DevOps Bootcamp

Hands-on projects in cloud infrastructure, CI/CD, container orchestration, observability, and automation.

Portfolio: GitHub Repository

- **Kubernetes & AWS EKS:** Deployed a Java application with MySQL on Amazon EKS, integrating AWS Fargate, Cluster Autoscaler, NGINX Ingress, and Amazon ECR. Configured Jenkins pipelines to automate container image delivery and application deployment.
- **Infrastructure as Code & CI/CD:** Automated AWS infrastructure provisioning using Terraform and reusable modules, with S3-backed remote state and Jenkins pipelines to make infrastructure deployments more consistent and repeatable.
- **Automation with Python:** Developed Python scripts using Boto3 to automate AWS resource monitoring and backup tasks, integrating automation workflows with Jenkins to reduce manual operational work.
- **Configuration Management with Ansible:** Automated server setup, software installation, application deployment, and repository management using reusable Ansible playbooks and roles, reducing repetitive manual configuration.
- **Kubernetes Deployment with Helm:** Packaged applications into reusable Helm charts and deployed them on Amazon EKS , simplifying application configuration and making deployments easier to manage consistently.
- **Monitoring & Observability:** Built a monitoring stack using Prometheus and Grafana to track application and infrastructure health. Configured Alertmanager to deliver alerts through Slack and email, enabling timely notifications when issues require attention.

DATA & ML PROJECTS

- **MkulimaAid**: Designed a fuul-stack web application using Flask where farmers upload a photo and a trained CNN diagnoses the crop disease, with dashboards of disease trends. (Click here)
- **Twitter sentiment analysis**: Analyzed social sentiment using Python (NLTK, pandas) and visualized insights from Twitter data obtained through web scraping leveraging Selenium.
- **Amazon bestsellers 2009–2019** : Analyzed top 50 bestselling books on Amazon from 2009 to 2019 to identify key trends in book sales, user ratings, price distribution, and genre performance to provide insights for authors, publishers, and marketers for effective recommendations and price strategies.
- **Tableau HR dashboard**: Created a HR Dashboard using tableau to mimic real-world scenario and important insights to consider in a working environment.

CERTIFICATIONS

- Certified Devops Practioner by Techworld with Nana
- AWS Certified Cloud Practitioner (CCPA)
- Kubernetes and Cloud Native Essentials (LFS250)
- Google Data Analytics Professional Certificate
- Cyber Shujaa Data and AI Specialist
- Dr Angela Yu 100 Days of Code Complete Python Pro Bootcamp
